SOURCE: CELLULAR TELECOMMUNICATIONS INDUSTRY ASSOCIATION.

COMPLAINTS:

Telephone service differs from many other services because consumers don't always know the price or even the vendor of the service they used until well after the service has been rendered. Some companies have taken advantage of this uncertainty by "slamming" consumers (becoming the customers' telephone service provider without their knowledge or consent), using hidden charges, or using other deceptive practices.

When this happens, consumers often file a complaint with the FCC. During 1996, the Consumer Protection Branch of the FCC's Common Carrier Bureau's Enforcement Division processed 35,095 written complaints and inquiries.

The Consumer Protection Branch serves a complaint by issuing an "Official Notice of Informal Complaint" to all companies identified in the complaint that are in the FCC's jurisdiction, or that may assist in the resolution of the complaint. Service of a complaint does not always indicate wrongdoing. Table 3.1 lists the number of complaints served on each of the 83 companies served with 50 or more complaints during 1996.

Revenue information is included for a number of the listed companies. Long distance carriers with revenues over \$109 million and incumbent local exchange carriers subject to the reporting requirements of the Commission are required to file public revenue figures. Carriers with less than \$109 million in operating revenues are also required to file revenue figures, but these figures are not made public. Where possible, other sources of public information were used to identify a company's revenue.

The complaint ratio for each company is the number of complaints served divided by its total communications-related revenue (measured in millions of dollars). If a company served with more than 100 complaints in 1996 had less than \$109 million in revenue and we could not determine its revenue from another public source, we calculated its complaint ratio based on \$109 million of revenue. Our \$109 million estimate for these carriers protects their privacy, but it also understates their true complaint ratios. Dividing their complaints by their true revenues would result in higher complaint ratios.

Of the 35,095 complaints processed by the Consumer Protection Branch in 1996, 36% involved slamming issues, 13% involved pay-per-call services, and 12% involved operator service provider rates and services. The remaining complaints covered a range of issues including international telephone rates, unsolicited calls or faxes and telemarketing.

SOURCES OF REVENUE DATA FOR TABLE 3.1

- (1) United States Telephone Association, Holding Company Report 1997
- (2) *Statistics of Communications Common Carriers*. Table 2.1.
- (3) Carrier's revenue was not publicly reported. Carriers with more than \$109 million in telecommunications revenue were required to publicly report their revenue. To calculate a ratio, \$109 million was assumed if the carrier had more than 100 complaints. As a result, the carrier's reported complaint ratio will be lower than its true complaint ratio.
- (4) Calendar year 1996 revenues were provided by a company representative.
- (5) Total 1996 revenue from SEC forms 10-K and/or 10-Q.
- (6) *Long Distance Market Shares, Second Quarter 1997*, released October 10, 1997, Table 5.
- (7) Company identifies itself as a billing agent, but did not disclose its revenues to the FCC.
- (8) 1996 telecommunications revenue from SEC forms 10-K and/or 10-Q.
- (9) Dun & Bradstreet report.

CONSUMER EXPENDITURES:

The Bureau of Labor Statistics conducts surveys of consumer expenditures, in part, to develop weights for CPI indexes. Table 4.1 shows expenditures for telephone service for all consumer units.

About 2% of all consumer expenditures are devoted to telephone service. This percentage has remained virtually unchanged over the past 15 years, despite major changes in the telephone industry and in telephone usage. Average annual expenditures on telephone service increased from \$325 per household in 1980 to \$708 in 1995.

The information on average telephone expenditures can be used to estimate the average monthly bills for households with telephone service. This average was about \$62 per month for 1995. Monthly bills have increased significantly since 1980, due partly to higher local rates, but primarily to more long distance calling. Residential toll calling grew by about 10% a year between 1985 and 1989 -- a period when toll rates declined dramatically. The average American household now spends more on long distance service than on basic local service, reflecting the growth in long distance calling since the AT&T divestiture in 1984.

TABLE 4.1
TELEPHONE SERVICE EXPENDITURES

| Year | Annual Expenditures (Average for All Households) | | Monthly Expenditures (Households with Telephone Service) | | |
|------|---|----------------------------------|---|--|------------------------------|
| | Telephone Expenditures | Percentage of Total Expenditures | Basic Local Service Charge * | Toll and Other Telephone Expenditures ** | Total Telephone Expenditures |
| 1980 | \$325 | 1.9 % | \$8.74 | \$21 | \$30 |
| 1981 | 360 | 2.1 | 9.71 | 23 | 33 |
| 1982 | 375 | 2.1 | 10.75 | 23 | 34 |
| 1983 | 415 | 2.1 | 11.58 | 26 | 38 |
| 1984 | 435 | 2.0 | 13.35 | 26 | 40 |
| 1985 | 455 | 1.9 | 14.54 | 27 | 41 |
| 1986 | 471 | 2.0 | 16.13 | 26 | 43 |
| 1987 | 499 | 2.0 | 16.66 | 28 | 45 |
| 1988 | 537 | 2.1 | 16.57 | 32 | 48 |
| 1989 | 567 | 2.0 | 17.53 | 33 | 51 |

| 1993 | 658 | 2.1 | 18.94 | 39 | 58 |
| 1994 | 690 | 2.2 | 19.07 | 42 | 61 |
| 1995 | 708 | 2.2 | 19.49 | 42 | 62 |

Source: Bureau of Labor Statistics.

* Monthly service charges for unlimited local service, taxes, and subscriber line charges.

** Calculated as total monthly bill minus the cost of basic local service. Figures may not add due to rounding. The "Toll and Other" category is primarily toll, but also includes charges for equipment, additional access lines, connection, touch-tone, call waiting, 900 service, directory listings, etc.

EMPLOYMENT:

The Bureau of Labor Statistics (BLS) publishes monthly data regarding the total number of employed workers in the communications industry. Specifically, BLS compiles employment statistics for the entire telephone communications industry (Standard Industrial Classification (SIC) 481) and for a subset of this industry, telephone communications minus radiotelephone (SIC 4813). The difference between these two figures yields the number of employees in the radiotelephone industry (SIC 4812).

SIC 4813 includes establishments primarily engaged in furnishing telephone voice and data communications, except radiotelephone and telephone answering services. SIC 4812 includes establishments primarily engaged in providing two-way radiotelephone communication services, such as cellular telephone service. It also includes telephone paging and beeper services. Neither of these categories includes employees from establishments primarily engaged in furnishing telephone answering services, manufacturing equipment, or engineering and research services.

Table 5.1 and the associated graph show the annual average employment figures in the telephone communications industry separately for SIC 4812 and SIC 4813 from 1951 to 1996. Since 1990, employment in the telephone communications industry has grown modestly. Most of the growth in employment over this period is the result of substantial increases in the radiotelephone (cellular, beepers, paging, etc.) industry, which grew at an annual average growth rate of approximately 20%.

BLS also calculates an annual telecommunications industry labor productivity index. The BLS index of labor productivity relates output to the employee hours expended in producing that output. This index, presented in Table 5.2, rose an average 5.8% per year from 1951-1995, with 1995 being the most recent data available. This average labor productivity factor is higher than the average in other industries (typically somewhere around 3 to 4%). This higher than average annual growth rate may be the result of telephone companies utilizing more efficient, advanced technology and increases in human capital. Table 5.2 and the associated graph illustrate the rising trend in telecommunications labor productivity since 1951.

| 1964 | 16.6 | 689.5 | 1980 | 25.3 | 1046.9 | 1996 2/ | 122.8 | 774.9 |
| 1965 | 17.3 | 717.9 | 1981 | 25.3 | 1052.0 | 1997 3/ | 141.3 | 780.4 |
| 1966 | 18.3 | 755.1 | 1982 | 25.3 | 1046.5 | | | |

1/ Due to Bell operating company employee strikes in 1983, 1986, and 1989, which lasted one month each, the reported annual average number of workers for those particular years is an average of the eleven months in which workers did not strike.

2/ The 1996 and 1997 figures include recent Bureau of Labor Statistic revisions.

3/ The 1997 figures are based on preliminary figures covering January through November of 1997.

| 1965 | 28.9 | 1980 | 67.6 | 1995 | 144.6 |

EQUAL ACCESS:

The BOCs serve slightly more than 75% of the nation's telephone lines and are obligated to offer equal access (i.e., "1-plus" dialing) to all long distance carriers. The BOCs have converted almost all of their lines to equal access, although there are a few lines at smaller, older offices where equal access is being provided as the offices are converted to more modern equipment. Independent telephone companies, which serve almost 25% of the nation's lines, have converted almost 98% of their lines.

Table 6.1 shows the number of telephone lines and the percentage of these lines converted to equal access since divestiture. BOCs converted almost half of their lines between December 1984 and December 1985, and an additional 40% in the next three years. Including independents, the United States reached 99% equal access conversion by mid-1996.

Table 6.2 shows the number of central office wire centers in each state that had been converted to equal access as of November 1, 1997. The table is derived from NECA's Tariff 4 database, which is updated by local exchange carriers. In some cases, there is a lag between an office converting to equal access and that change being reflected in the database. Thus, in some cases, the data continue to show some offices not yet converted to equal access even in states where equal access is reported to be available to all customers. Because the non-equal access offices tend to be smaller offices, the percentage of converted lines is significantly greater than the percentage of converted offices.

* The Information in this table is based on the NECA FCC Tariff No. 4 database. Some companies do not report information on their remote switches in Tariff No. 4. As a result, central office counts may be lower than reported in other sources.

INTERNATIONAL TELEPHONE SERVICE:

International telecommunications has become an increasingly important segment of the telecommunications market. International telephone calling -- propelled by technological innovation, increased international trade and travel, and stable or declining international telephone rates -- has skyrocketed. The number of calls increased from 200 million in 1980 to 3.5 billion in 1996. In 1996, Americans spent about \$14 billion on international calls. International private line revenues have also increased since 1980, but telex and telegraph services declined substantially over the same period. These trends are shown in Table 7.1.

U.S. and foreign carriers compensate each other when one carries traffic that the other bills. The number of calls billed in the United States increased at a faster pace than calls billed in foreign countries, contributing to rapid increases in net settlement payments to foreign carriers. These net payments from the United States to other countries reached \$5.6 billion in 1996. On average, carriers billed \$.74 per minute for international calls in 1996 and paid \$.43 per billed minute in settlements. Trends in settlement payments are shown in Table 7.2. On average, for all traffic, carriers retained \$.30 for each international minute that they handled in 1996.

International traffic data is available on a country-by-country basis. Table 7.3 summarizes traffic by region of the world. Five markets -- Canada, Mexico, the United Kingdom, Germany, and Japan -- currently account for about half of the international calls billed in the United States.

Since 1985, when MCI first entered the market in competition with AT&T, numerous carriers have begun to provide international service. Forty-seven carriers provided international telecommunications service in 1996 by using their own facilities or lines leased from other carriers. These carriers billed \$15 billion for international services, of which \$14 billion was for telephone service. Table 7.4 shows the U.S.-billed revenues for each of the 47 carriers. Together, AT&T, MCI, and Sprint account for 95% of the facilities-based international service billed in the United States.

In addition to the 42 carriers that owned or leased facilities, about 300 carriers reported the resale of international message telephone service. These carriers reported \$3.5 billion of resale revenue in 1996. The revenues for the fifty largest resellers are shown in Table 7.5.

* Billed revenue per minute for international service differs in Table 14.3 and Table 7.1. Data in Table 14.3 is based on traffic to foreign points for all U.S. carriers serving all U.S. points. Data for Table 7.1 is based on traffic for domestic U.S. points only. The domestic U.S. includes Puerto Rico but excludes American Samoa, Guam, the Northern Mariana Islands, and the U.S. Virgin Islands.

** Includes transiting traffic.

The region totals include all traffic reported by carriers serving Alaska, Hawaii, Puerto Rico, and the conterminous United States, and include traffic between these points and offshore U.S. points such as Guam and the U.S. Virgin Islands. This traffic is shown separately as the total for U.S. points, and also is included in the total for all international points.

LIFELINE AND UNIVERSAL SERVICE PROGRAMS:

The FCC has established two assistance programs for low-income subscribers. The first program is designed to assist low-income subscribers afford the monthly cost of local telephone service and is called "lifeline." Connection assistance or "Link-Up" programs, the second type, are designed to help low-income subscribers defray installation charges in order to begin receiving telephone service. Participating states have wide latitude in selecting means tests and shaping the benefits of the programs. Programs have been established in all 50 states, the District of Columbia, the Virgin Islands, and the Commonwealth of Puerto Rico. The type of program in each state at the end of 1997 is indicated in Table 8.1, along with the year in which a program was first certified.

On May 7, 1997, the Commission voted to make major changes which became effective on January 1, 1998. These changes expand Lifeline to make it available in all states and territories, modify the state matching requirements, and increase the federal Lifeline support amount.

In addition to the programs for low-income subscribers, a Universal Service Fund provides support to local telephone companies that have high costs. Through the end of 1997, all of these assistance programs were financed by monthly charges imposed on larger long distance carriers. Each long distance carrier serving more than .05% of the nation's telephone lines was billed monthly on a per-line basis to support these programs. These charges are shown in Table 8.2. Under the rules taking effect on January 1, 1998, the per-line charges previously paid by long distance carriers have been discontinued. Instead, all providers of interstate telecommunications, now contribute to the provision of universal service based on the amount of their telecommunications revenues.

* Billings are made by the National Exchange Carrier Association to interexchange carriers that have more than .05% of the nationwide total presubscribed lines. These carriers serve approximately 98% of total presubscribed lines. The 154.5 million access lines shown for July 1, 1997 are the number of qualified USF loops of billed carriers contributing to the Universal Service Fund.

LOCAL COMPETITION:

For most of this century, households and businesses have had no choice in selecting their local telephone company. Mobile telephone services are widely available, at an increasing range of prices, but they are not yet accepted in the marketplace as complete substitutes for traditional local telephone service. In the 1980s, new companies began to offer some competitive local telephone services over wired networks. These companies (e.g., MFS Communications Company and Teleport Communications Group) typically built telecommunications network facilities in areas with concentrations of office buildings and offered to carry calls between business customers and the networks of long distance carriers. These companies were often called "competitive access providers" or CAPs. To some extent they also carried local telephone calls among their customers, but they did not offer local calling services to the public generally.

In the 1990s, some of these competitive access providers, other companies including affiliates of cable television companies (e.g., Hyperion Telecommunications, Time Warner Communications) and local service divisions of long distance companies (e.g., MCI Metro), began to offer local telephone calling services to a broader range of telephone users. For example, some companies that were already established in larger cities added operations in smaller cities, where the typical customer is more likely to be a small or medium size business than a large business, and some new companies (e.g., McLeodUSA Incorporated) focused on smaller cities from the beginning. The newer competitors are often called "competitive local exchange carriers" or CLECs, although the terms CAPs and CLECs are often used interchangeably.

While local telephone service competition has tended to develop first in larger cities and for business customers, data reported to the Commission do not measure systematically such market-by-market evolution of competition. The Commission imposes no data reporting requirements on new local service competitors beyond the requirement, which applies to all telecommunications companies, to report their nationwide revenues each year, and the information provided by individual companies receives confidential treatment. Information about local service revenues earned by categories of companies is made public, however, and is discussed below.

The Commission also surveys investment in fiber optic transmission systems by new local service competitors and by the established, or incumbent, local telephone companies. Finally, the Commission has required the largest incumbent local telephone companies to report limited information about the extent of interconnection between their networks and the networks of the new local service competitors. These data also are discussed below.

Nationwide Local Service Revenues and New Competitor Share.

Table 9.1 shows that local service revenues of new local service competitors have been growing much faster than the local service revenues of the incumbent local telephone companies. The new local service competitors are starting from a very small base, however, so their share of total local service revenues remains small.

Facilities Investment of New Local Service Competitors: Fiber Optic Transmission Capacity.

Chart 9.1 depicts the comparative investment in fiber optic transmission systems by new local service competitors and the incumbent local telephone companies in recent years. The new competitors doubled the total amount of fiber they had in place from approximately 0.6 million fiber miles at the end of 1995 to about 1.3 million fiber miles at the end of 1996. In contrast, the incumbent local telephone companies had in place about 12.3 million fiber miles in 1996, an increase of approximately 15% over year-end 1995. "Fiber miles" are calculated by multiplying the number of miles of fiber cable -- including both lit fiber (i.e., fiber that has been activated to carry telecommunications by the addition of optoelectronic equipment) and dark fiber (i.e., fiber that has not yet been activated) -- by the number of fiber strands per cable.

At the end of 1996, therefore, new local service competitors had approximately 10% of the total fiber optic systems capacity, as measured by fiber miles, that apparently is or could be activated to carry calls within local telecommunications markets and to deliver calls to long distance carriers. This comparison of relative fiber deployment may overstate the relative size of new local service competitor networks, however, because the transmission networks of the incumbent local telephone companies consist predominantly -- as much as 90%, by some estimates -- of copper-based facilities. The Commission collects no information on the extent to which the fiber optic transmission systems of new local service competitors are activated to carry telephone calls, and in this respect as well they may differ from the incumbent local telephone companies.

Facilities Investment of New Local Service Competitors: Equipment Installed in Incumbent Local Telephone Company Central Offices.

New local service competitors may more effectively compete in local telephone service markets -- and, in particular, may more effectively compete for the mass, or residential, market -- if they are able to locate their own transmission equipment near the incumbent local telephone company central office (i.e., telephone network switch) that directly serves a customer that the new competitor seeks to serve. The Commission first ordered such "collocation" arrangements to be made available for the provision of competitive access services (i.e., connecting customers directly to long distance telephone companies). In addition, the Telecommunications Act of 1996 requires incumbent local telephone companies, with a few exceptions for small companies, to provide collocation arrangements in a form that will enable a new local service competitor to use

portions of the incumbent company's network (e.g., the telephone line that runs to the customer's home or business) to compete against the incumbent company.

The Commission required the largest incumbent local telephone companies to report, in 1995 and 1997, which of their central offices have collocation arrangements, and to identify the competitors using such collocation arrangements. Table 9.2 shows that the number of incumbent telephone company central offices with collocation arrangements increased between 1995 and 1997. The table also demonstrates that the number of new local service competitors using collocation arrangements increased between the two years. As detailed in the notes to Table 9.2, the reporting incumbent telephone companies used different definitions (e.g., operational arrangements *versus* arrangements that are operational or in progress *versus* requested arrangements) when reporting collocation arrangements in a single year, and in some cases a company used different definitions in its filings in the two reporting years. Neither the incumbent telephone companies nor the new local service competitors are required to report the extent to which the reported collocation arrangements are being used to carry telephone calls within local areas, as opposed to connecting calls to long distance carriers. Using data in Table 9.2 to compare the development of local service competition in the areas served by different incumbent local telephone companies may be misleading, therefore, and these data should not be summed up for the incumbent companies.

TABLE 9.1
NATIONWIDE LOCAL SERVICE REVENUES* AND NEW COMPETITOR SHARE
(Dollar Amounts Shown in Millions)

| | 1993 | 1994 | 1995 | 1996 | Average Annual Growth 1993-1996** |
|---|----------|----------|----------|----------|--|
| 1 Number of CAPs/CLECs*** | 20 | 30 | 57 | 109 | 76.0% |
| 2 CAP/CLEC Local Service Revenues | \$178 | \$281 | \$595 | \$949 | 74.7% |
| 3 Bell Company# Local Service Revenues | \$58,838 | \$61,415 | \$65,485 | \$70,290 | 6.1% |
| 4 Local Service Revenues of Other Incumbent Local Telephone Companies | \$20,828 | \$23,424 | \$24,269 | \$24,899 | 6.1% |
| 5 All Other Local Service Revenues## | \$850 | \$1,298 | \$388 | \$379 | ### |
| 6 Nationwide Local Service Revenues (line 2 + line 3 + line 4 + line 5) | \$80,694 | \$86,418 | \$90,737 | \$96,517 | 6.2% |
| 7 CAP/CLEC Share of Nationwide Local Service Revenues (line 2 / line 6) | 0.2% | 0.3% | 0.7% | 1.0% | |
